

**METHOD, SYSTEM, AND APPARATUS FOR DYNAMIC DATA-DRIVEN PRIVACY
POLICY PROTECTION AND DATA SHARING**

ABSTRACT

A method of sharing telematics data for a vehicle with service providers can include receiving the telematics data for the vehicle, where the telematics data dynamically changes over time, and comparing the telematics data with a privacy policy associated with the vehicle. The privacy policy can specify rules for selectively releasing items of the telematics data to one or more service providers. Data items of the telematics data can be selectively provided to the service providers according to the comparing step.
